

How to see the slide presentation

The slides for the R lecture were made inside R with Rmarkdown. This integrates the R code, code results and text together in the slides. Here's how to use these slides:

1. Open the .Rpres file with RStudio
2. Click the preview button at the top of the text editor window in RStudio
3. Note that a presentation appears in the upper left box in RStudio
4. Click the + button to pop the presentation out into its own window and view at a large size
5. You can also view the presentation full screen with your web browser. To do this, click the More drop-down button, and click View in browser
6. To navigate the presentation, click the buttons or the left and right arrows on your key board
7. To rapidly change slides, press o
8. To view full screen, press f
9. The presentation will look best if the custom.css file is in the same folder with the .Rpres file
